History AutoCAD, initially known as Autodesk Drawing, was developed at what is now Autodesk Labs, a research and development facility in San Rafael, California. Autodesk, which began as a small, two-man operation, hired many of the people who worked on the drawing toolkit in 1982. This toolkit, the first one to use a mouse-driven interface, was called AutoLISP. A year later it was renamed AutoCAD, but the toolkit continued to be referred to as AutoLISP. The early version of AutoCAD, the first public version, was unveiled at the SIGGRAPH Computer Graphics 1980 conference in August 1980. AutoCAD software v.1 (1981) The first public release of AutoCAD, designed and implemented by Jeff Frankfort and David Nicholls, was titled AutoCAD 1.0 and was released on August 26, 1981. This version of the product included ten separate drawings. AutoCAD 1.0 was built on one operating system (IBM OS/360) and came in a bundle called CAD Workbench. Its primary target market was architectural firms in the US. AutoCAD 2.0 (1982) AutoCAD 2.0 was introduced in June 1982, as AutoLISP and AutoCAD 1.0 became closely associated. The product grew rapidly, adding many features and drawing tools to its base of AutoLISP and assembly functions. The final version was released in 1983. As of September 2010, it remains the product that is shipped with AutoCAD 2011 and AutoCAD LT 2011 (and earlier versions) and is also sold separately. AutoCAD 2.0 had an overall codebase of more than 250,000 lines of LISP code. AutoCAD 3.0 (1983) In 1983, AutoCAD 3.0, introduced as AutoCAD 2.1, was the first of the major AutoCAD releases. The codebase grew to over 700,000 lines of LISP code. A Windows-specific version (WinLISP) was also introduced, providing AutoCAD 3.0 with a Windows GUI. Later releases of AutoCAD would use this GUI, even on systems without Windows, such as the Macintosh. AutoCAD 3.5 (1985) AutoCAD 3.5 was the first AutoCAD release to include features a1d647c40b
