Architecture and components The AutoCAD architecture is based on the classic Berkeley Software Distribution (BSD) model. The model dictates that the Operating system is a service to the applications, which are composed of components, which are service to users. AutoCAD supports GUI operation using the GDI+ API, which is part of the Windows API. The drawing engine, which is a part of the product, is largely influenced by the same drawing engine used by the AutoCAD R13 since 1998. AutoCAD applications are composed of different components, including a presentation layer, drawing engine, database and communication components, etc. These components communicate with each other by using internal objects and API's. Editing, modeling and drawing features The following are the types of features supported by AutoCAD: Modeling Drawing Geometric editing Data management Web services Autodesk Exchange Since version 2012, AutoCAD's DXF file format is based on Autodesk Exchange. To export, users must first create a drawing file by using the model builder. Thereafter, users can export the drawing file in a number of formats, including BIN, DXF, FBX, JPG, PDF, RTF and SVG. Users can also import the drawing files into AutoCAD for editing, modification and sharing.
